

1 Introduction to the Program

1.1 The Menu

1.1.1 File

The *File* menu consists of the following entries:

- **New:** opens a new empty file for editing.
- **Open:** opens saved file from directory.
- **Open in new Tab:** same as open but in new tab.
- **Reload:** reload the currently opened file.
- **Save:** save changes.
- **Save as:** save changes and choose directory/name.
- **Analyse++:** analyse many petrinets at once. Results are printed in the text area.
- **Close:** close currently opened file.
- **Exit:** close the program.

The *Edit* menu consists of the following entries:

- **Open Editor:** opens the Editor.
- **Close Editor:** closes the Editor and reverts back to Viewer.
- **Change Look and Feel:** change between Nimbus and Metal look and feel.

The *Help* menu only consists of the element *Info*, which shows information about the Java version used and the user directory.
